

Do you know about Newborn Screening?

Testing for over 30 disorders  
***Newborn Screening***  
It's more than PKU!

Phenylketonuria or “PKU” was the first disorder that started newborn screening in the 1960’s. Today the testing includes over 30 potentially life-threatening disorders. Referring to this testing incorrectly can cause confusion for doctors, parents and could delay lifesaving treatment for newborns.
